luteal phase support you can trust

For Healthcare Professionals Use Only
When is Oripro® used?

**TGA indication:**
Assisted reproductive technology (ART) treatment of infertile women with progesterone deficiency, requiring progesterone supplementation or replacement to support embryo implantation and maintain initial pregnancy.

Oripro® is used in ART for:

- Luteal phase support
- Fresh IVF cycles
- Thaw IVF cycles
- Natural/clomid IVF cycles
- Intrauterine insemination
- Recipients of donor oocytes
- Maintenance of initial pregnancy
Why Oripro®?

ORIPRO® IS MADE IN AUSTRALIA, IN A REGISTERED HORMONE FACILITY, PROVIDING ASSURANCE OF A QUALITY MEDICINE

State of the Art Hormone Facility

Quality control

GMP Compliant Manufacturing Process

Trained Personnel
Women who do not produce enough progesterone may have a higher rate of miscarriage and find it difficult to achieve pregnancy.³

Administration is Simple

1. Wash your hands thoroughly with soap and water.

2. Tear the wrapping to remove applicator from packaging and remove a single pessary from the foil strip.

3. Pull back the plunger and place the pessary in the end of the applicator. The pessary should fit snugly and not fall out.

4. Gently insert the applicator into the vagina as far as it will go, while seated or laying down with the knees bent.

5. Push the plunger all the way in to release the pessary. Remove the applicator and throw it away in a waste container.

6. Do not use lubricating gels or any other creams as these could interfere with the effectiveness of the pessary. Disposable gloves can be worn if desired.

7. Remain lying down for at least 30 minutes after insertion of the pessary.

8. The best time for a pessary to be inserted is before retiring at night. If your doctor has advised you to use two pessaries a day, the second pessary should be inserted at least 30 minutes before rising in the morning.

9. You may wish to wear a panty-liner for minor discharges whilst using the pessaries.

Ask our Medical Information Team about other routes of administration.
PBS Listing of Oripro®

PBS Listing: (Section 100 IVF/GIFT)
“For luteal phase support in patients who are receiving medical treatment as described in items 13200 or 13201 of the Medicare Benefits Schedule. The luteal phase is defined as the time span from embryo transfer until implantation confirmed by positive B-hCG measurement. 15 pessaries per script, no repeats.”

- No limits to the number of prescriptions a patient can receive.
- Private prescriptions for other ART indications.
- Script ‘Oripro’ to ensure your patients receive the quality they deserve.
- Tick the ‘No substitution’ box to make sure your patients receive the ‘Oripro’ brand.

Luteal phase support you can trust

Trusted therapy of luteal phase support.
Perrigo has been supplying Progesterone Pessaries to Australian IVF centres since 1985.

Give your patients the support they deserve.
Manufactured under stringent quality control conditions, ensures your patients consistently receive a quality product. Oripro® are the only TGA approved progesterone pessaries in Australia.

Available in 100mg (15’s) and 200mg (15’s) strengths.
You are able to tailor the treatment regime to suit your patients’ needs with the availability of multiple dosage strengths.

How many Oripro® pessaries can be claimed on PBS per cycle?
There is no limit to the amount of pessaries that can be claimed in the luteal phase of a Fresh IVF cycle.

Oripro® is a natural pessary.
The progesterone is sourced from the oil of vegetable seeds including canola and soybeans.

Can Oripro® be used for post luteal phase support?
Yes, the pessaries can be prescribed (on a private script) for post luteal phase support. The pricing of the Oripro® should be an advantage for patients compared to other progesterone products that can be used for post luteal phase support.
Choose Oripro®

Be confident your patients are receiving progesterone that is:

✓ Cost effective
✓ Registered therapeutic product
✓ PBS listed
✓ Made in Australia
PBS Information: Section 100 IVF/GIFT. For luteal phase support in patients who are receiving medical treatment as described in items 13200 or 13201 of the Medicare Benefits Schedule. The luteal phase is defined as the time span from embryo transfer until implantation confirmed by positive B-hCG measurement.

Please review full Product Information (PI) before recommending. The full PI is available from Perrigo Australia upon request (FREECALL: 1800 805 546). Progesterone (Oripro®) is available in 100mg and 200mg strengths. Oripro® is PBS indicated for luteal phase support in patients who are receiving medical treatment as described in items 13200 or 13201 of the Medicare Benefits Schedule. The luteal phase is defined as the time span from embryo transfer until implantation confirmed by positive B-hCG measurement. **Contraindications:** Sensitivity to progesterone, sensitivity to hard fat, undiagnosed vaginal bleeding, undiagnosed urinary tract bleeding, liver dysfunction or disease, active thrombophlebitis or thromboembolic disorder (deep vein thrombosis, pulmonary embolism) or a history of hormone associated thrombophlebitis or thromboembolic disorder, pregnancy (when normal progesterone levels are present), known or suspected malignancy of the breast or genital organs, missed abortion. **Precautions:** Before initiation or recommencing progesterone therapy in women, a physical examination should be performed, including special attention to the breasts, abdomen and pelvic organs and a Papanicolaou (Pap) smear. Please refer to the product information for interactions with other drugs. **Side effects:** Adverse Reactions indicating need for medical attention: Incidence more frequent; Reproductive, Female: Amenorrhoea, abnormal breakthrough uterine bleeding or metromenorrhagia, spotting, changes in cervical eversion and secretions. Metabolic and Nutritional: Hyperglycaemia (dry mouth, frequent urination, loss of appetite, unusual thirst). Incidence less frequent; Reproductive, Female: Galactorrhoea. Psychiatric: Mental depression. Skin and Appendages: Skin rash, Pruritus. Incidence rare; Endocrine: Adrenal suppression or insufficiency (causing symptoms of dizziness, nausea or vomiting, unusual tiredness or weakness). Circulatory System: Thromboembolism or thrombus formation (causing headache or migraine, loss of or change of speech, coordination or vision, pain or numbness in chest, arm or leg; unexplained shortness of breath). Other adverse reactions - See full PI for complete list. **Dosage and Administration:** Usual dosage is 200mg daily to a maximum of 400mg twice a day. Dosage in assisted reproductive technology (corpus luteum insufficiency) is 25mg to 100mg one to two times a day initiated within several days of ovulation. See full PI for dosage instructions. Perrigo Australia 25-29 Delawney Street, Balcatta, WA 6021.
